ABSTRACT

The article describes the causes of HIV infection, its routes of transmission, this infection in adolescents and changes in psychological processes in adolescents under its influence, stressful situations and measures to prevent them. A person's health and life are above all. Therefore, a person should not be indifferent to his health throughout his life, otherwise he may face disappointments. Because there are different types of people in the society we live in, ming unfortunately among them the presence of people being treated for or infected with a contagious disease constantly calls us to vigilance.

KEYWORDS: *HIV infection, adolescence, stress, remedy, correction, immunity, virus, mental processes, syndrome, cognitive.*
