ABSTRACT

The principles of didactics in the educational process through the use of computer technology, such as consistency, coherence, scientific city, demonstration, are described. Using them allows you to write textual graphic information together at the same time, while creating a high-quality image when you reproduce it. One of the main features of innovative pedagogical technologies is the widespread use of didactic materials that determine the effectiveness of computer technology and technical means. The National Program of Personnel Training emphasizes this important tool for managing the educational process. Using them allows you to write textual graphic information together at the same time, while creating a high-quality image when you reproduce it. Unlike magnetic recording, recording on optical discs does not lose quality even in any number of reflections.
