ABSTRACT

The article examines the features of the architectural organization of the school of the new direction using the example of the Irkutsk Smart School. A clear and so far the only example of building a school based on this concept is a school in the Irkutsk region. The features of the project, designed for more than a thousand students, are a compact low-rise closed planning composition of buildings with openness, thanks to extensive panoramic glazing into the surrounding nature. The features of the project, designed for more than a thousand students, are a compact low-rise closed planning composition of buildings with openness, thanks to extensive panoramic glazing into the surrounding nature.
