### ABSTRACT

*Terminology is the great important for every fields. In this article, we analyzed the basic principles of creating industry terminology (industry terminology) and tried to clarify the leading principles of terminology. The compound of achievements of two or more areas of knowledge in one, the sphere of modern science, technology, social practice leads to the formation of a combined totality of terms, and in many cases the terms of the new region are twisted, organically combining the term one area. The most ramified is the linguistic classification of terms of a certain area, more precisely, a complex of linguistic classifications, which includes, first of all, a meaningful classification and at least eight formal-structural classifications (by individual linguistic structures), to which classifications by the source language and on the novelty of terms. Thus, the term can be any word that is given a clear definition, which defines the concept able concept and rigidly limiting the conceptual sphere, providing isolation from the philistical meanings of the homonymous words of general vocabulary.*

**KEYWORDS:** *Term, Term Systems, Agricultural Terms, Classification, Internationalism, Borrowing.*
