**ABSTRACT**

*This article highlights the practical technological system of using Maria Montessori's techniques for the mental development of preschool children, the development of fine motor skills. At the same time, classes are held in five development zones, that is, in conjunction with practical exercises, sensory, linguistic, mathematical zones and materials located in the cosmic or natural-scientific sphere of education. . The most important principle in Montessori style is to stimulate the child to self-education and self-development. For this, a ready-made environment has been created that will help the child, that is, specially prepared for children, development areas have been highlighted: practical life classes, sensory, linguistic, mathematical and cosmic spheres.*
