ABSTRACT

The presented work presents the concept of simultaneous operations, a review of domestic and foreign literature on the problems of performing simultaneous operations in gynecology - issues of terminology, classification, features of performing combined operations when combining gynecological diseases with another surgical pathology. The main advantage is the ability to reduce the burden on the patient's body, reduce the time of treatment and recovery. In some cases, such operations are not the surgeon's choice, but are dictated by the need, for example, in traumatology or in complex lesions.

KEYWORDS: Simultaneous Operations, Gynecology, Surgery, Pathology.
