ABSTRACT

The expansion of onomastic research in Uzbek linguistics has led to the development, formation and development of this scientific field. He has defended his doctoral and master's theses on the study of Uzbek names and toponyms, published dozens of monographs, collections and pamphlets, and many articles. All this indicates that Uzbek onomastics is a unique scientific field of linguistics. Language as an instrument of social communication is inextricably linked with the history of society, because every change that takes place in society leaves its mark on its language. That is why linguistic materials help to cover certain aspects of the history of society, where historical documents and written monuments are weak. Thus, a nation is a linguistic, territorial, economic, and cultural unit that precedes a nation. Ethnic tribes began to form during the formation of tribal alliances. Ethnic groups are usually made up of several tribes with the same origin and language, or tribes that have been mixed and conquered by one another.

KEYWORDS: *Ethnonym, Ethnotoponym, Necronym, Geradot, Torg Pompey, Xenophon, Mahmud Kashgari, "Devonu Lug'otit-Turk".*
