**ABSTRACT**

*The experience of modern military conflicts shows that artillery intelligence plays an important role in the reliable and effective destruction of enemy targets. To do this, a number of requirements are placed on artillery intelligence. Therefore, this article presents the modern means of artillery intelligence, the requirements for them and relevant suggestions for its improvement in the interests of casualties. Modern military conflicts are characterized by speed, rapid change of the situation and the need to make non-standard decisions. By meeting such requirements, the battle can be won. This will require the correct application of the methods and techniques of effective use of means of loss transmission.*

**KEYWORDS:** *Intelligence, Artillery intelligence, Radar station, Unmanned aerial vehicles, Casualties, Data area, Automated fire control system.*
