ABSTRACT

This article discusses the issue of linguistic personality and its speech capabilities. The category of decones as the main experiment source of pragmalinguistics. A study of the person actant of the cut category and its speech event shows that the person actant and the owner of the sentence are mutually proportional, but not the same thing. In this case, the person may or may not be equal to the owner and may be equal to zero. In this regard, the distinction between personal (person) deix, locative (space) deix and temporal (time) deix in all languages is justified. These isolated types of deixis have their own characteristics and are distinguished by special means of expression in all languages.
