 UZBEKISTAN

### ABSTRACT

*The article presents balance and methods of additional feeding 4,0-4,5 and 9-10 month aged local male goatlings. Indicators of meat productivity were defined in experiment by their ages, chemical broberties of meat and muscular tissues were studied. The information is given about foraging in the condition of pasture and influence of additional feeding on living weight of goatlings.*

**KEYWORDS:** *Goatlings, Meat Production, Additional Feeding, Slaughter Weight, Slaughter Output, Chemical Composition Of Muscle Tissue.*
