ABSTRACT

Currently, the goals, strategies, tasks and content of professional training of university students are undergoing significant changes: the formation of thinking focused on the construction of non-standard forms and models of real professional activity comes to the fore. From these positions, the following skills become important for the future specialist: orientation to project and mobility, independence in solving professional tasks – thus, we are talking about the acquisition of competence.

KEYWORDS: *Independent Study, Tasks, Self-Study, Learning Tools, Strategy, Systemization.*
