KEYWORDS: *Pedagogy, Education, Education, Theory, Methodology, Spiritual, Heritage, Values, Decrees, Manners, Means, Culture*

INTRODUCTION

The future and development of any nation depends on the spiritual maturity, worldview, intellectual potential of young people. In particular, raising the spiritual qualities in the minds and hearts of young people, strengthening solidarity in families and communities, strengthening ideological immunity against ideological and information attacks, spiritual and moral criteria, the priority of national and universal values, regular study of geopolitical and ideological processes, terrorism, extremism, ideology. Understanding the essence of such issues as effective ideological fight against human trafficking, drug trafficking and other dangerous threats, dedication to the development of our developing country, honest work, and thorough mastery of the secrets of modern science are among the most pressing tasks today.

Indeed, the Resolution of the President of the Republic of Uzbekistan dated March 26, 2021 "On measures to radically improve the system of spiritual and educational work" provides for fundamental, practical and innovative research in spiritual education and social sciences, increasing the effectiveness of spiritual and educational work in all sectors of education. The basis of education is the organization, implementation, study of the heritage of our great

ancestors, who contributed to the development of world science, a deep understanding of the rich spiritual heritage left by them, the formation of highly spiritual, competitive personnel through the effective application of modern technologies in education.

Education and its theoretical foundations are an integral part of pedagogical sciences, studies the content, shape, methods, tools, tools, tools, tools, tools, and techniques, as well as the problems of the educational process.

Currently, as well as in educational institutions, teacher educators pay special attention to the formation of young people as spiritually, mature person. In this regard, President Shavkat Mirziyoyev emphasizes: "Another issue is crucial: this is the professional level of teachers and professors, their special knowledge. It is necessary to create an environment that actively supports the process of education, spiritual, enlightenment maturity and the formation of real values".

In this regard, if we think about the goals and objectives of education, education is a process of comprehensive development of the younger generation on the basis of a specific, clear goal and socio-historical experience, the formation of its consciousness, behavior and worldview. In different times and places, social education has been expressed in essence differently, and its content is based on social goals.

The purpose of education is determined by social order. From the simplest action to the most comprehensive state program, education is always goal-oriented. Without a purpose, there can be no upbringing that does not express a particular idea. Based on the purpose of education, based on its content, the methods and techniques that serve to achieve the goal are identified. The problem of the purpose of education is one of the most pressing issues of pedagogy.

The purpose of education can be general and individual in nature. Advanced pedagogy demonstrates the unity and harmony of general and individual goals. The goal is aimed at the positive solution of the general social goal of education and manifests itself as a system of specific tasks. Hence, the purpose of education is a system of tasks to be solved on the basis of the organization of the educational process. Educational goals are grouped into general and specific tasks according to their nature and scope.

Human qualities such as spiritual and moral purity, faith, honesty, piety, honor, kindness, and respect for the elderly, which play an important role in the spirituality of society and the maturity of the individual, do not form spontaneously. At the heart of all this is the content, ideological direction and effectiveness of education for the younger generation in the family, general secondary, secondary special, vocational and higher education.

An important component of social education - a new approach to the organization of mental, spiritual, moral, physical, labor, aesthetic, legal, environmental, economic education for the formation of the younger generation as a modern, harmoniously developed person, to develop their effective ways. The output is particularly relevant. These are the most important tasks in education.

In this regard, in recent years, large-scale reforms have been carried out and implemented in our country. First of all, not only in our country not only in our country not only in our country is

extremely important in the upbringing of the younger generation of the younger generation growing.

According to the Resolution of the Cabinet of Ministers of the Republic of Uzbekistan dated July 6, 2020 № 422 "On measures for the gradual implementation of the subject" Education "in general secondary education", there are noble goals, such as deepening the values and high spirituality, educating them in the spirit of patriotism and humanity, the organization of spiritual and educational work in general secondary education on a new basis.

Also, the introduction of a single subject "Education" in general secondary education, combining the disciplines "Ethics", "Sense of Motherland", "The idea of national independence and the foundations of spirituality" and "History of world religions" has great educational value for students, serves to enrich their knowledge, to raise their spiritual maturity.

Today's issue of education of modern globalized, modern technical technology is a factor in the developed period - every nation is a factor in which the future is the future.

In particular, the XXI century entered as a computer age in human history. However, it is necessary to work, based on how effective and the technique is developing and increasing an important place in the life of the society, raising a person in public life, based on nationality of Central Asian thinkers, leading options of Central Asian thinkers, and the leading views of Central Asian thinking.

In the upbringing of young people in a harmonious man, the valuable spiritual heritage of Eastern will be as an important program. Such as the Muhammad al-Khwarizmi, Abu Nasr Farabi, Abu Ali ibn Sina, Abu Rayhon Beruni, Ahmad Al-Farghani, Imam Ismail al-Bukhari, Ahmad Yassavi, Bahouddin Naqshband, Amir Temur, Mirzo Ulugbek, Alisher Navoi and Zakhtaliddin Muhammad Babur. The social, political and philosophical views of popular scientists play an important role in all-time.

From no one, a person who does not know his past's cultural heritage did not study and honor his ancient descendants, he or she does not know his life.

The study of the cultural heritage of the past is a complex process. Sampling for cultural heritage and the absorption of the noble ideas in the age of-generation should be carried out continuous, consistent, systematically, and purposeful.

In particular, the President of the country noted the following statements at the solemn ceremony dedicated to the 29 th anniversary of the independence of the Republic of Uzbekistan: The first Renaissance of Uzbekistan, fell to the second-philosan stone and Temur and the Temurids. It was not only Movaraunnahr, but the whole of the Central Asian countries increased to a new level of development. It was also noted that during this period, the development of science, culture and arts was manifested and the rise of contemplations was manifested.

In this speech of the head of our state, the word "The glorious power of our people is still being created in Uzbekistan - the period of a new renewal - the third of Renesans".

In fact, the rise processing process in our lives in growing rapidly is displayed in all areas. In the early years of independence, it was tried to reveal the original essence of our national identity,

rich historical, spiritual and scientific heritage. It should be noted that our people have joined the idea of "national revenue - the national construction" in steadfast.

So, it is difficult to enrich the minds of youth and worldview today, on the basis of historical principles in educational system, on the basis of historical role in all stages of the education system.
