### ABSTRACT

*In different countries, the implementation of such a digital innovation system in economic practice is carried out in accordance with the strategic goals of the country. This generation of crypto-assets is usually not backed by assets with a specific value, and their value is often very variable, limiting their practical use and turning them into a risky form of investment rather than a profitable currency. With this in mind, we believe that it is advisable for each country to develop a legal framework with a deep thought in the legalization of cryptocurrency.*

**KEYWORDS:** *Crypto-Assets, Regulatory Sandbox, Crypto Fiat Currency, Back-Office*
