ABSTRACT

At present, various hearing aids are used to improve the hearing perception of children and adults with various hearing impairments. However, not all devices can improve the effect of speech on auditory perception during use. Some hearing aids partially and partially affect the hearing of people who are unable to hear due to various technical, physiological and pathophysiological causes of various sensorineural deafness.

KEYWORDS: *Physiological And Psychological Characteristics, Cochlear Implantation, Sensory Deafness, Electrical Stimulation.*
