ABSTRACT

This article provides a brief overview of works on the study of zoolexics in the synchronous aspect, clarifies the main zoolexics used in the analysis, describes the semantic content of zoonism as a primary nomenclature and its functions. In addition, the lexical-semantic version of the zoonym is analyzed - the linguistic status of zoomorphism. In this regard, some problems of zoometaphor and zooidentification, questions related to the main elements of the connotative content of zoomorphisms, are considered.
