ABSTRACT

Today, society needs socially active, independent and creative people capable of self-development. Innovative processes in education require new approaches. The formation of motivation for the development and learning of preschoolers, as well as creative cognitive activity - these are the main tasks that the teacher faces today within the framework of federal state educational standards. These difficult tasks, first of all, require the creation of special learning conditions. In this regard, design is of great importance. In the article, we reveal the conditions for working on LEGO technology and robotics with the children of our group.

KEYWORDS: *LEGO Design, Creative And Productive Activity.*
