### ABSTRACT

*The literacy rate in India in 2022 is examined in this research. An important factor in determining a country's degree of development is literacy. The percentage of adults over the age of fifteen who are literate is known as the literacy rate. Some emerging nations are attempting to raise the literacy rate, including Bangladesh, Nepal, Laos, and India. In the past ten years, India's literacy rate has increased significantly. India still has lower levels of literacy than many other nations, though. The literacy rate is 77.70%, with literate males at 84.70% and literate females at 70.30%, according to the National Family Health Survey (NFHS-5) and National Statistical Office: NSO (2021 and 2022). Women appear to have a low literacy rate despite the high percentage of males that are literate.*
