ABSTRACT

This article analyzes the parable of the role of bioethics in the human-social system. Trends in the development of bioethics have been studied. Based on the need for biotechnology. The scope of efforts to study the problems of bioethics is also expanding. Because at all stages of its history, humanity has sought a deeper understanding of the essence of this issue. From this perspective, bioethics has a very ancient history. We recall the methodological principle of philosophical anthropology, according to which culture is a way of preserving human nature. Thus, it can be said that medical ethics is an integral part that serves to further define the principles of bioethics. Medical ethics, on the other hand, is enriched with new approaches through a deeper understanding of critical issues from a bioethical perspective.
