ABSTRACT

The tailstock that allows machining long and concentric components, as well as drilling, reaming and threading. More precise measurements can be obtained with more careful work and more rigorous procedures by personnel competent in skill and ability. It is the conventional machine tool widely used to produce flat and also cylindrical surfaces, in the manufacture of gears, cylindrical straight teeth, helical, hypoid, dovetail, in dies it is used to manufacture punches of different shapes and cutting dies and inlay.

KEYWORDS: *Precise, Gears, Cylindrical, Helical, Hypoid, Dovetail*
