ABSTRACT

In English language, as in Uzbek language, the randomness of manner expressions in the lexical layer is carried out directly by action verbs and lexemes belonging to word group of adverb, which act as an adverbial modifier in the sentence. These lexemes can also be semantically stratified according to the manner expression they express in speech. In dictionaries, it is important to cite words with manner expressions through examples that include level indicators and other semantic-syntactic features. The fact that the means of manner of action in English are widespread at the lexical, morphological, syntactic levels of the language, the fact that a manner of action sema can be expressed at different levels requires extensive coverage, interpretation and study through the principles of dictionary. This article examines the issues of presenting forms of action manner in English language in annotated dictionaries, translation dictionaries, academic dictionaries and thesaurus dictionaries. Therefore, in expressing lexicographic principles, interpretive principles and general linguistic requirements of the manner lexemes in dictionaries are analyzed on the basis of examples. On this basis, scientific evaluation was given to the achievements of English lexicography in traditional lexicography.

KEYWORDS: *Randomness, Category Of Manner, Semantics, Gradonymy, Lexicographic Principle, Annotated Dictionary, Academic Dictionary, Thesaurus, Language Corps, Microsystem, Microstructure*
