### ABSTRACT

*The acute toxicity of the anthelmintic dry extract "Helmint-ART" was studied on white male mice. As a result, it was found that the studied anthelmintic dry extract is practically non-toxic at the studied doses and routes of administration. The local irritating features of the anthelmintic dry extract "Helmint-ART" were studied in an experiment on rabbits. The allergic features of the Helmint-ART dry extract were studied on guinea pigs. Also, in the experiments on laboratory animals, it was found that it has neither local irritating nor allergic features.*

**KEYWORDS:** *Helminths, Dry Extract, Acute Toxicity, Local Irritating Effect, Allergic Features, White Rats, Rabbits, Guinea Pigs.*
