ABSTRACT

The article proposes an original formulation of the problem of the connection between leadership and personality development. Leadership is considered as the driving force of self-development of the personality of creative organizational leaders starting from the period of adolescence. The conceptual basis for the study of leadership as a determinant of personal development is defined. The design of a pilot study is described, the purpose of which is to identify psychological signs of the ability for self-development in high school students. Empirical studies have been carried out, during which personal characteristics included in the structure of the ability for self-development of high school students have been established. The prospect of further research into the problem of leadership as a factor in the development of personality in adolescence is determined.

KEYWORDS: *Leadership, Personality, Development, Personal Development, Self-Development, Ability For Self-Development, High School Students, Youthful Period Of Development.*
