ABSTRACT

The relevance of the study is determined by the financial importance of ensuring the implementation of sustainability the financial net activity of synchronization for the stability of the functioning of the functions of any organizational enterprise, since its competent construction determines the financial stability of the enterprise and denotes prospects for its economic development. However, in the scientific literature, approaches to the definition of the concept and essence of financial activity differ in many respects, as the authors put emphasis on different aspects that form the basis of this process. In this study, the most optimal approach to determining definition of the concept of financial activity of the enterprise, are properly defined its objectives and adequate means for its realization; identified and analyzed the structures components of financial activity, its subject and the most economic ski effective destinations. As a result of the analysis of the structural elements of the financial it was proved that the proposed approach to determining its essence is the most progressive. The results of the study are largely to some extent expand the boundaries of existing approaches to the definition of this concept.
