ABSTRACT

The article encompasses the linguistic peculiarities of actualization of unreality by means of mood category, i.e. the Subjunctive Mood in English and in Uzbek, partially. It analyzes diachronical and synchronical overview of the subjunctive mood evolution. These forms are the same as past tense forms in the external tense, and so grammarians interpret them differently in their work: some regard them as antonyms, others as a form of the past tense that serves in English to express temporal and unreal meanings. One of the characteristic features of speech is modality. Modality is the attitude of the content of speech to reality, the subjective attitude of the speaker to reality.

KEYWORDS: *Irreality, Category, Subjunctive, Mood, Conjugation, Expression, Modality, Inflection.*
