ABSTRACT

This article provides a brief analysis of the species listed in the Red Book of the Poaceae family in Uzbekistan. Protecting the environment and flora is of vital importance to humanity. As humanity uses nature, it is changing its centuries-old natural landscape, which is having a negative impact on it. The development of industry and agriculture, the large-scale development of natural areas are leading to ecological imbalances.

KEYWORDS: *Flora, Kohitang, Poaceae, Endemic, Ridge, Mountain-Forest, Ecotism, Fruit, Nature.*
