ABSTRACT

A river usually flowed through the city, to provide water, transport, and sewage disposal. The Romans had a very logical way of designing their cities. The concept of garden cities arose and several model towns were built. However, these were principally small scale in size, typically dealing with only a few thousand residents. More citizens calling for democratic planning & development processes have played a huge role in allowing the public to make important decisions as part of the planning process. These allowed substantial freedoms, yet enforce styles, safety, and often materials in practical ways. Many conventional planning techniques are being repackaged using the contemporary term growth.
