ABSTRACT

This article describes the caries of the permanent fissure area in children and its causes, diagnosis and prevention. The problem of caries fractures is a leader in cariesology because Fissura caries ranks first in the frequency of carious lesions in other localizations. The high prevalence of fissure caries is characterized by the anatomical shape of the cracks, their long cooking time compared to the smooth surfaces of the teeth, retention of food debris, the area of cracks due to lack of high quality dental hygiene, labor-intensive The diagnosis is often made subjectively.
