ABSTRACT

The article discusses the current state and development of innovative activity in improving the quality of the educational system, describes the essence of improving the quality of the educational system, the theoretical foundations of the organization of innovative activities, and the current state and development of the effective use of information and Communication Technology Opportunities in the educational process.

KEYWORDS: *Quality Of Education, Efficiency, Information And Communication Technologies, Scientific And Innovative Activities.*

INTRODUCTION

The rapid development of science, technology, production and technology has opened up new prospects for the development of society in all spheres of life. Humanity's centuries-old experience of state and society construction has led to the decision of advanced approaches to regulating social relations based on new approaches.

The training of highly qualified personnel with modern knowledge and high spiritual and moral qualities, who think independently, is an urgent task facing today's higher education system. Today, it is necessary to gradually transfer the educational process to the credit-module system in higher education institutions, to introduce advanced standards of higher education based on international experiences. Also, raising the content of higher education to a new level in terms of quality, training highly qualified personnel who will contribute to the sustainable development of the social sphere and economic sectors, and who can find their place in the labor market, has not lost its importance.

In recent years, large-scale work is being carried out in our country to create a higher education system that meets the priority directions of socio-economic development and the requirements of international standards. The establishment of new higher education institutions in the regions, the opening of modern educational directions and specialties of personnel training, part-time and evening departments, and the increase of admission quotas to higher education institutions are important reforms in this direction.

At the same time, there are still a number of problems that hinder the improvement of the quality of education in higher education institutions, the wide-ranging reforms implemented in the republic, and the active participation of these institutions in social and economic reforms.

From the first years of independence, the development of the education system in our country has been raised to the level of state policy, ensuring that our youth acquire modern knowledge and skills in conditions corresponding to world standards, mature into physically and spiritually mature people, realize their abilities and talents, intellectual potential, and mother in their hearts. Effective work is being done to improve feelings of loyalty and devotion to our country.

Globalization processes in the world and the current environment of deep competition between companies require specialists to be prepared for it. They not only provide favorable conditions for the development of their ideas and the practical implementation of the created theoretical models, but at the same time, they are also an important intellectual factor for the innovative development of the economy.

In fact, the question of the quality of modern education is one of the problems that must be solved first. After all, the existing higher education institutions in our country will form the knowledge of specialists in a specific professional field in the future. Higher education institutions serve the country's development in all aspects. The level of development of modern technologies based on the high level of intellectual resources and the competition of countries that want to own these resources serve as the main factor of not only economic, but also social and political progress. If we look at the higher education institutions with the highest rating in their countries, all of them are located in the territory of developed countries, and it should be noted that they serve to further strengthen the position of their countries in the world community. In the conditions of modern globalization, all educational institutions are trying to ensure that the formation and development of the educational system in higher education institutions is in accordance with the new innovative conditions and the requirements of the economy.

Strategic goals and priorities for the development of the higher education system. The following are the strategic goals of the development of the higher education system:

- to improve the quality of training of highly qualified personnel for the modernization of the country, sustainable socio-economic development, development of human capital based on the requirements of the labor market;
- to increase the level of coverage with higher education, to train highly qualified, creative and systematic thinking personnel, able to make independent decisions based on international standards, to create the necessary conditions for their intellectual abilities to manifest and their formation as morally mature individuals;
- to create a healthy competitive environment in the industry, to increase its attractiveness, to ensure global competitiveness.

Based on long-term goals, the development of the higher education system is carried out on the basis of the following priorities:

- to expand coverage with higher education, to improve the quality of training of highly educated specialists;
- introducing digital technologies and modern methods into the educational process;
- increasing the efficiency of scientific and research work in higher educational institutions, wide involvement of young people in scientific activities, formation of innovative infrastructure of science;

- increasing the effectiveness of spiritual-educational and educational activities;
- ensuring financial independence and stability of higher education institutions, strengthening material and technical support;
- systematic development of higher education institutions and improvement of management activities; fight against corruption, introduce effective mechanisms to ensure transparency;
- to increase the investment attractiveness of the higher education system, to ensure international recognition and competitiveness.

On the basis of improving the quality of education, implementing the latest achievements of science and technology, it is envisaged to carry out important tasks such as preparing creative, professional, creative and independent thinking, initiative-taking young people who feel their own responsibility.

This in turn, requires the use of modern educational technologies in the educational process. Educational training organized on the basis of modern educational requirements increases the quality of this process, develops the knowledge, skills and abilities of learners, creative abilities, and increases interest in the profession.

In short, improving the quality of the educational system is divided into innovations as scientific instruments, innovative activities and the educational system. In order to assess the level of importance of a set of innovations in improving the quality of education, they are divided in this order.

To improve the quality of the educational system in the Republic of Uzbekistan, it is necessary to develop the methodological foundations of the development of innovative activity and the problems of innovation management based on modern requirements. The effectiveness of innovative activities in improving the quality of the educational system depends on the innovative goals and capabilities of the higher education system, and the innovative thinking skills of employees.
