ABSTRACT

A hard disk drive (HDD) is an external memory that is the primary storage device in a computer. It stores all programs and data. Hard disk drives are often referred to as hard disks because they consist of aluminum and ceramic disks coated with a rotating ferromagnetic layer. Once the appropriate settings have been made and the interactive whiteboard is in working condition, it is possible to interact with the images projected on the surface of the interactive whiteboard using a projector. Portable overhead projectors have a prefabricated structure that does not exceed 7 kg. Typically, such models are very convenient with easy assembly and have a special set of bags for carrying. During videoconferencing, a microphone is mounted directly on the head of the camera, in such sizes the color balancing is done automatically, increasing the sharpness of the image is done manually. Beginner cameras have 5 video signals and a composite output.

KEYWORDS: *Hardware, interactive hardware, operating systems, modern operating systems, Distributors, Mobile operating systems, interactive training, multimedia presentations, Internet resources, software.*
